Sagar Dattatray Auti

Java Backend Developer | sagarauti302@gmail.com | +91 8767283299 | Pune, India | LinkedIn Profile

PROFESSIONAL SUMMARY

Java Developer with 4 years of experience in building backend applications using Java, Spring Boot, and Microservices. Skilled in developing REST APIs, working with MySQL, Kafka, Docker, Kubernetes, and AWS, with experience in healthcare and enterprise applications. Passionate about writing clean, scalable, and high-performance code while collaborating in Agile teams.

TECHNICAL SKILLS DETAILS

Languages: Java 8/11/17/21

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Backend: REST APIs, Microservices, Multithreading, Collections, Java Streams

Databases: MySQL, PostgreSQL

Messaging: Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, CI/CD

Tools: Git, GitHub, Postman, Swagger/Open API, IntelliJ IDEA, Maven

Practices: OOP, Design Patterns, JWT Authentication, Agile/Scrum, Debugging, production troubleshooting

WORK EXPERIENCE DETAILS

Software Developer - Riomed Technologies — May 2023 – Present

- Developed and maintained backend applications using Java, Spring Boot, and Microservices, building scalable REST APIs for healthcare and enterprise applications.
- Developed and supported healthcare interfaces integrating Cellma EHR with laboratory, imaging, PAS, and third-party systems using HL7 v2.x, FHIR, REST APIs, XML, and JSON.
- Configured Mirth Connect and Open Integration Engine (OIE) channels to receive, validate, transform, route, and monitor ADT, order, and result messages.
- Built FHIR APIs using Java and Spring Boot for Patient, Encounter, ServiceRequest, Specimen, Observation, and DiagnosticReport workflows.
- Performed interface mapping, end-to-end testing, UAT, go-live support, and production troubleshooting across TCP/MLLP, HTTP/HTTPS, and SFTP connections.
- Coordinated with clients, vendors, and internal teams to clarify requirements, resolve interface issues, and ensure reliable message processing.

Software Developer - Tata Consultancy Services — May 2022 - Feb 2023

- Developed and maintained backend applications using Java, Spring Boot, and Microservices, building scalable REST APIs for healthcare and enterprise applications.
- Improved API performance by optimizing MySQL queries, indexing, and connection pooling, reducing response time by up to 50%.
- Containerized applications using Docker and managed local environments with Docker Compose, simplifying development and deployment.
- Implemented secure REST APIs using Spring Security, JWT authentication, and role-based access control (RBAC).
- Worked with MySQL and MongoDB for data storage, query optimization, and efficient data retrieval.
- Integrated Kafka for asynchronous communication between microservices.
- Collaborated with cross-functional teams in an Agile environment, participated in code reviews, debugging, and unit testing using JUnit and Mockito.

PROJECTS DETAILS

Cellma Healthcare EHR Application — 2023 – Till Date

- Modernized a large-scale healthcare platform from Struts/Hibernate to Spring Boot and React with a team of 10 members,
- delivering 10+ modules across 3+ healthcare domains using MySQL, and supporting deployments for multiple international
- clients. Strengthened application security by performing DAST with Burp Suite and OWASP ZAP with Snyk, to identify
- and remediate SQL Injection, XSS, CSRF/XSRF, and authentication bypass vulnerabilities; configured Azure WAF and
- encryption to defend against DDoS and data-exposure risks in line with OWASP guidelines.

Cellma Integration with Lab and Imaging Systems — 2024 – Till Date

- Implemented FHIR RESTful API using Spring Boot to read investigation requests and create FHIR ServiceRequest messages.
- Handled Base64-encoded PDF decoding and storage of investigation reports using AWS S3.
- Designed microservices architecture with REST and event-driven patterns for service-to-service communication.
- Enabled doctors to view lab and imaging results directly within Cellma, improving diagnostic workflow efficiency by 30%.
- Utilized AWS Lambda for serverless processing of incoming FHIR messages and CloudWatch for real-time monitoring.

Cellma Online Appointment Booking Portal — 2025 –Till Date

- Developed a scalable online patient booking system using Spring Boot microservices and React frontend, allowing patients to book, cancel, and rebook appointments.
- Integrated automated email/SMS reminders and routine appointment booking features, reducing no-show rates by 25%.
- Deployed the application on AWS EC2 with load balancing and auto-scaling configurations for high traffic handling.
- Implemented caching with Redis to improve response times for frequently accessed appointment data.

SoldMyTickets – Resale. Buy. Sell. Transfer — 2026 – Till Date

- Built and shipped a mobile-first PWA/TWA ticket resale platform connecting buyers and sellers across events, travel, sports, movies, and vouchers.
- Implemented mobile-number OTP login via 2factor.in, real-time chat with attachments, read receipts, and typing indicators, plus a Rs 49 subscription flow with BharatPe QR verification.
- Added an admin panel for user/listing management, role-based access control, multi-language support (English/Hindi/Marathi), and published it to a custom domain with Play Store-ready assets.

EDUCATION DETAILS

M.Sc. Computer Science, **Savitribai Phule Pune University, Pune** | **Aug 2019 - Feb 2022**

B.Sc. Computer Science, **Savitribai Phule Pune University, Pune** | **Jun 2016 - Apr 2019**
